NEW ORDER

BY STEFAN DIEZ

Times are changing, and so is the way we store our life. Personal papers no longer take up several ring binders but are now neatly organized in the digital cloud alongside thousands of photos, music tracks and films. The digital age is having an impact even outside the area it has revolutionized, including the shelving systems, which used to store all these things in tidy rows. Today, the shelving unit has become more of a stage for storytelling where we exhibit personal objects and curios collected over the years. New Order matches its time by providing a shelving system that is so flexible in structure and composition that you can modify it, expand it and customize it in endless variations.

New Order is a 100% industrial choice, and we are proud of that, because this approach has led to a high-precision product in a strong modern material with exceptional properties. At first glance, the system architecture is ultra-simple, but on closer acquaintance it proves quite complex in its multi-purpose versatility. New Order can be tall or short, wide or narrow, open or closed – or any combination in between. Add to that a contemporary colour palette and uncompromising details, all of which brings added functional and aesthetic value to a ground-breaking system that is capable of adapting to keep up with the times.

New Order supports new ways of organization. Ways that are far more versatile than other shelving systems, and which speak to both your feelings and your intellect. New Order represents a vision of offering a flexible space for what you choose to collect and display throughout your life.

Mette and Rolf Hay

ARCHITECTURE

New Order is architecture that creates space.

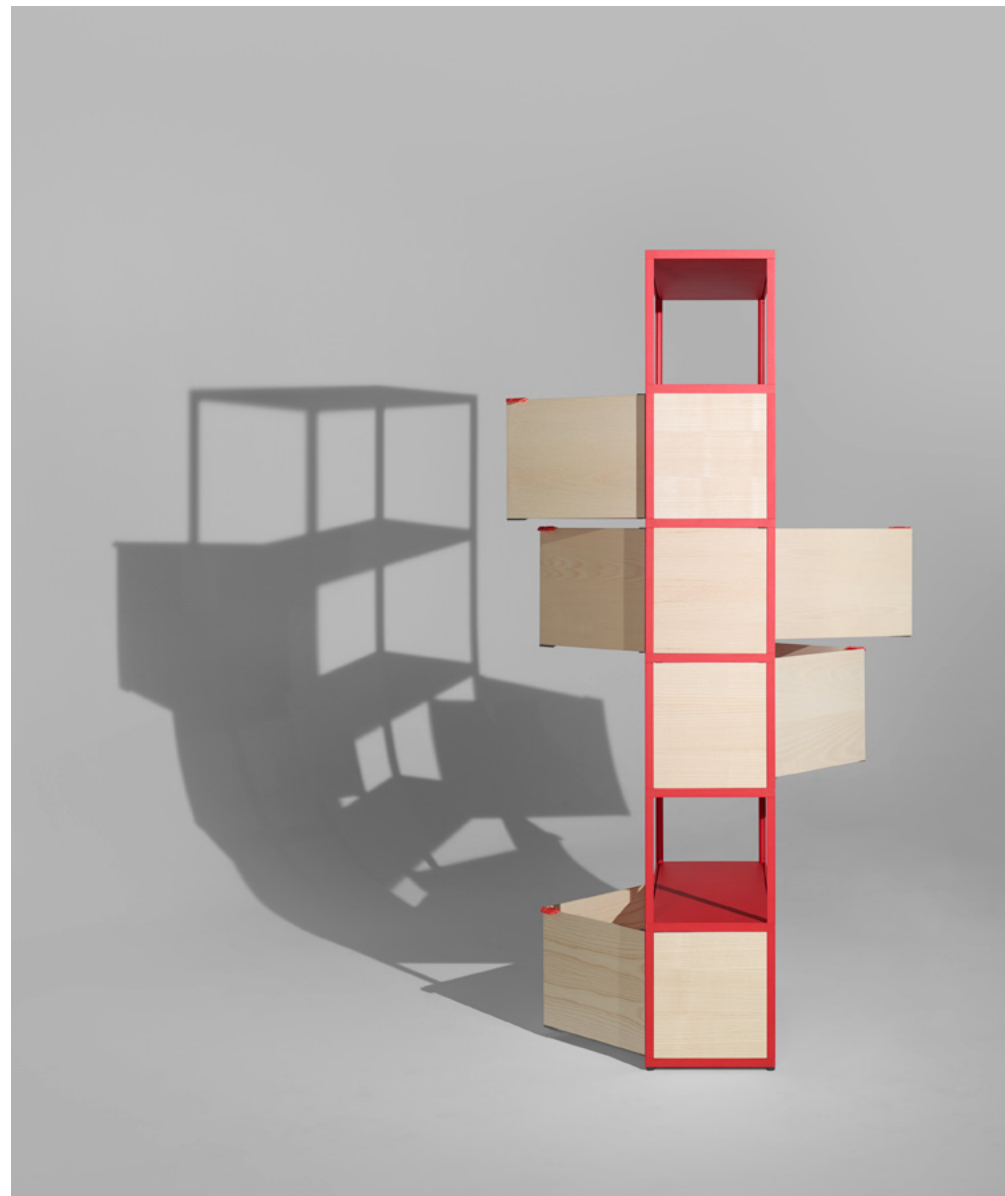

Space for storage. Tidy and orderly space.

New Order is spatial architecture because the system organizes around the requirements of the context and is therefore both a space-dividing and space-creating system. New Order's simple grid and innovative elements that are up to 2 metres long let you build airy, open compositions or closed constructions with side panels and sliding doors.

By adding panels all around you can achieve a wall-like expression, as the closed cabinets take on visual substance and weight despite their actual lightness. As an added bonus, no amount of clutter behind the cabinet doors is going to make the slightest impression on the clean, minimalist exterior.

STORIES

New Order is an untraditional approach to traditional storage in a system with carefully designed functionalities. Initially, the simple, graphic grid appears almost ascetic, but gradually the system takes on substance. A tray instead of a shelf brings a homely touch – and the height of the tray gives New Order a more corporeal expression. A coloured background creates visual calm and gives the system backbone. Add side panels, and the unit gradually closes up. Click a sliding door into place, and you have a full-fledged functional storage solution.

“New Order sets new standards for shelving systems because the industrial manufacturing process has been incorporated into the product design from the outset. The functionality is exceptional, with doors that can be clicked on and off without the use of tools; and the aesthetic experience is equally convincing.”

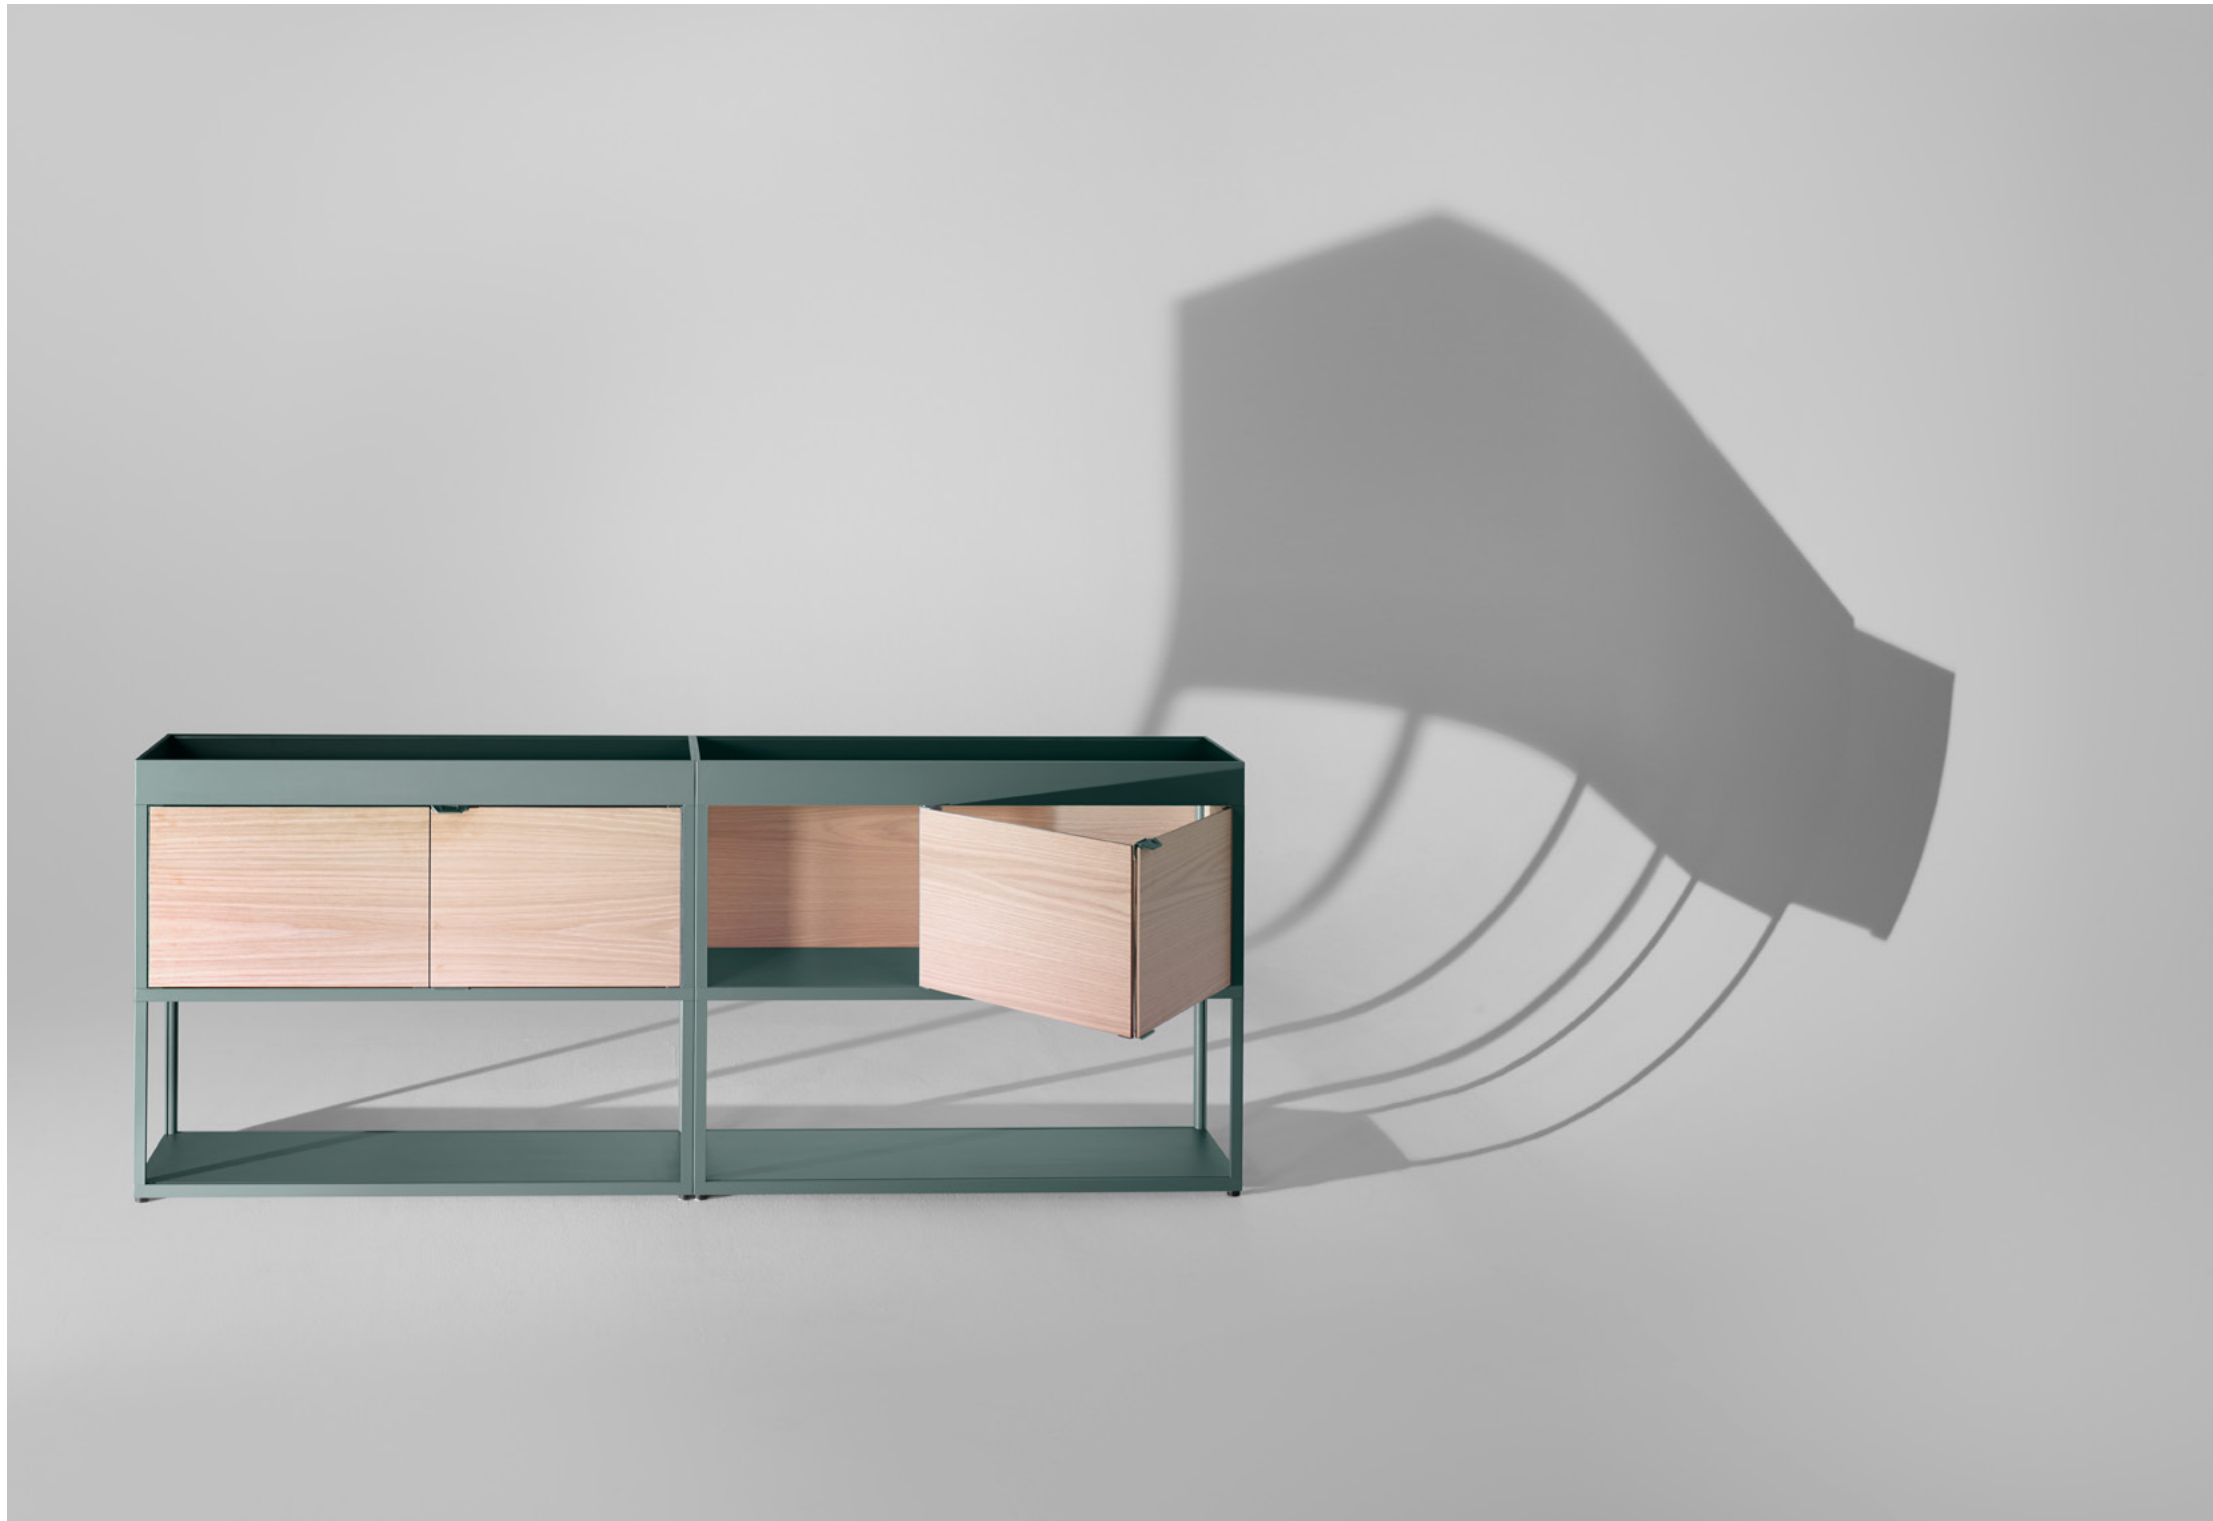

/ Rolf Hay

Low side cabinet with top tray in light grey with stained light grey ash panels.

"New Order is open space in sections that are up to two meters long – a length that no other shelving units can match, because wood cannot support the weight of books in such a long span. This is new and strong and will help New Order to go far."

/ Rolf Hay

"Things are increasingly important to us because they recall the different details in our life."
/ Stefan Diez

"New Order is like an alphabet, where you can create new words, sentences and meaning in different accents."

/ Stefan Diez

COLOURS

New Order features a modern handful of classic and contemporary colours that underscore the capacity of the system to go all the way to offer a unique and personal solution. Black, light grey and army are the classic colour codes, while yellow, red and chocolate are the new signal colours that let New Order rise above our conventional expectations for shelving systems. Add to that the possibility of combining this colour selection with natural ash or oak, stained black or light grey ash – and New Order climbs to the top of your personal and professional wish list.

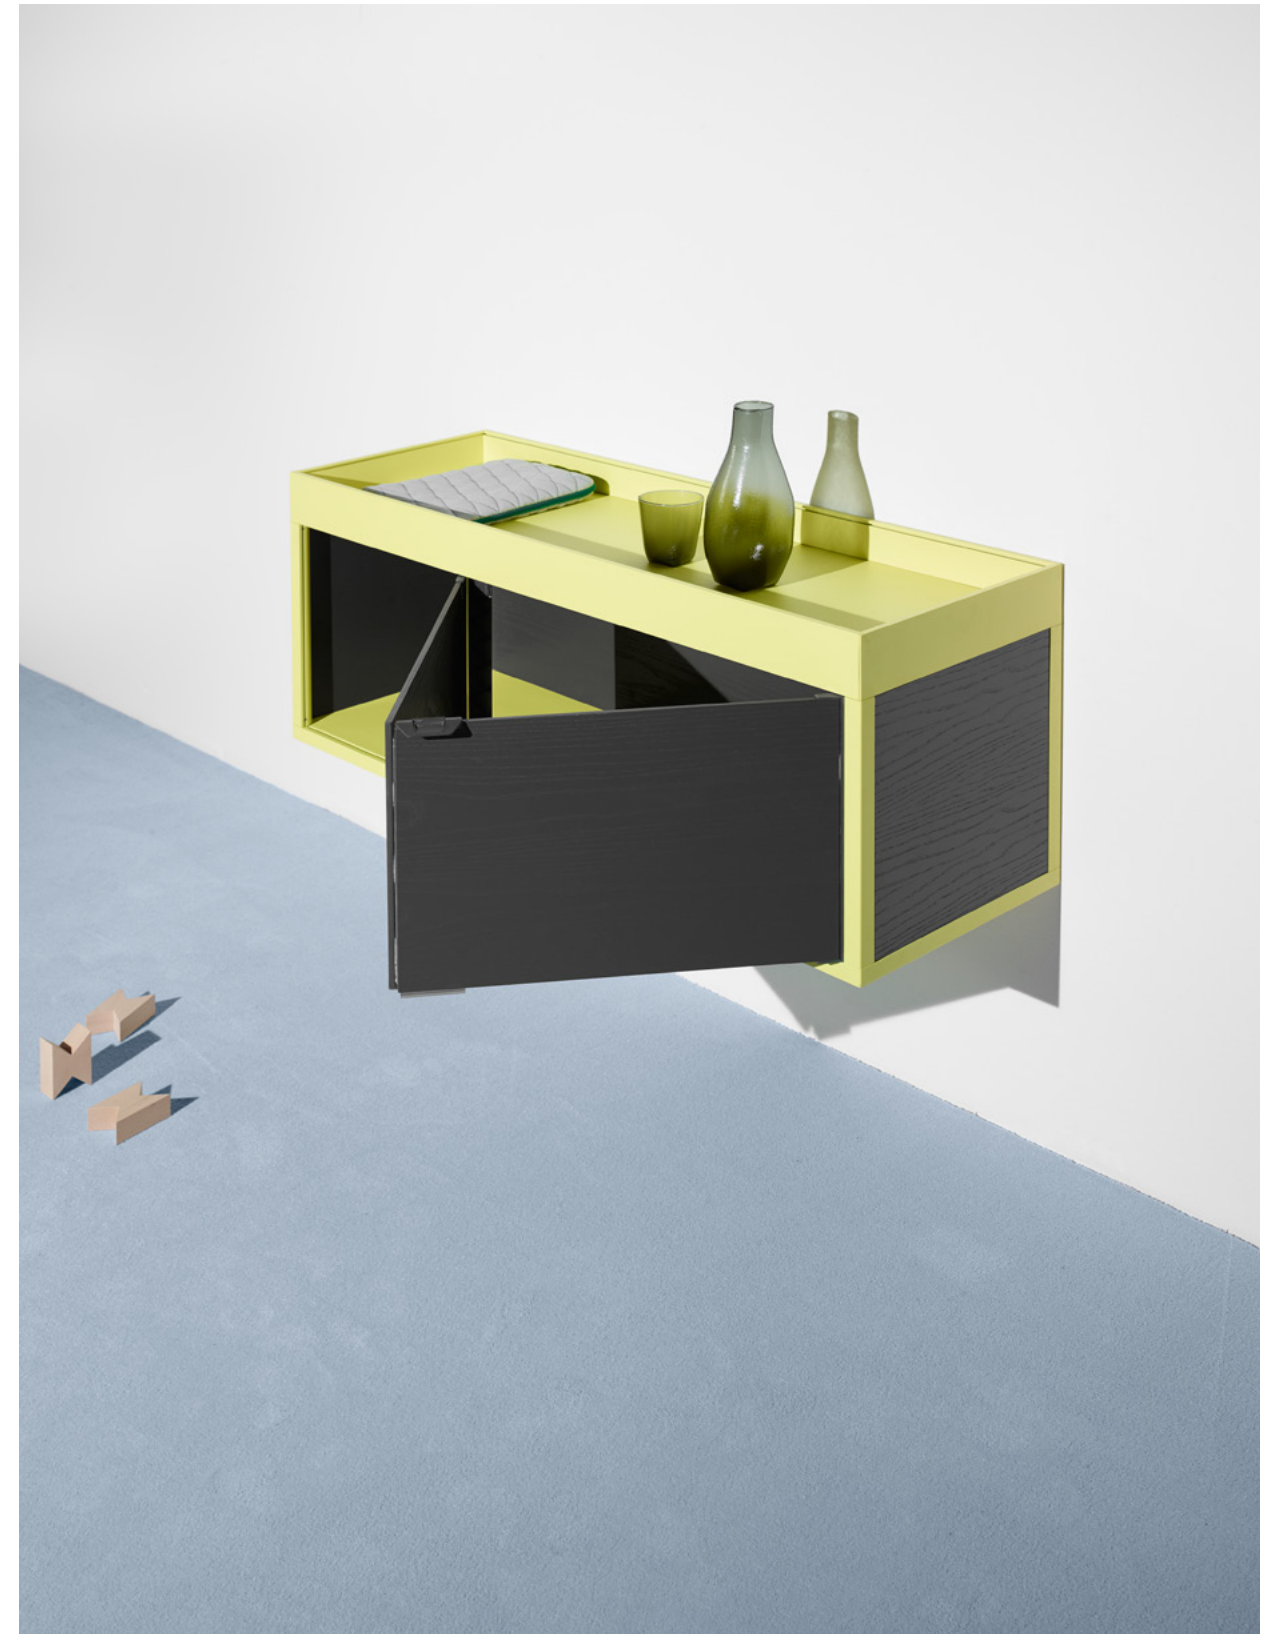

"We have created a signature with various characters breathing the same air within the same family spirit. New Order is received as furniture, even though it is a system."

/ Stefan Diez

WALL-MOUNTED

New Order can also be mounted on the wall, offering both functional storage and a visual renewal of interior space. Establish alternative formations by constructing new structures in colour sections, perhaps in combination with wooden panels and doors to create unique storage architecture. Build horizontally and vertically. Design open or closed spaces. Make room to store your life in new ways in new constructions and colour combinations.

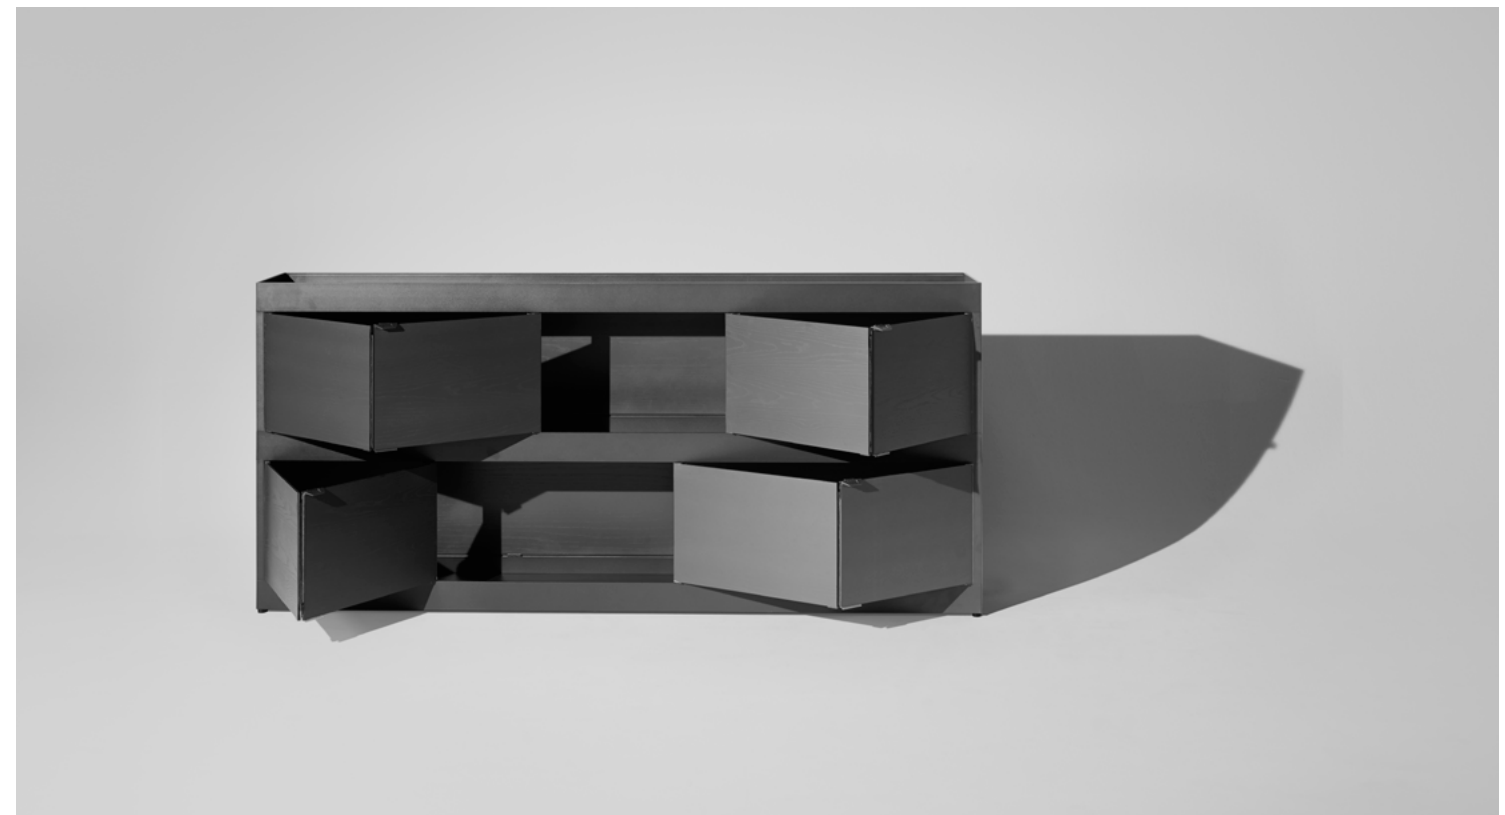

Wall-mounted cabinet in yellow with sliding door in stained black ash.

HINGES and DOORS

New Order is born of industrial production. This reflects HAY's core ambition of creating uncompromising quality products. The hinges are high-precision design engineering, and physically and visually they are so light that you barely notice them. They just do their job. The hinges are designed to be clicked into place without the use of tools, just as the panels simply slide in, and the door is easy to fold. New Order is the flexible lightness of storage in a durable form.

CORNER MODULE

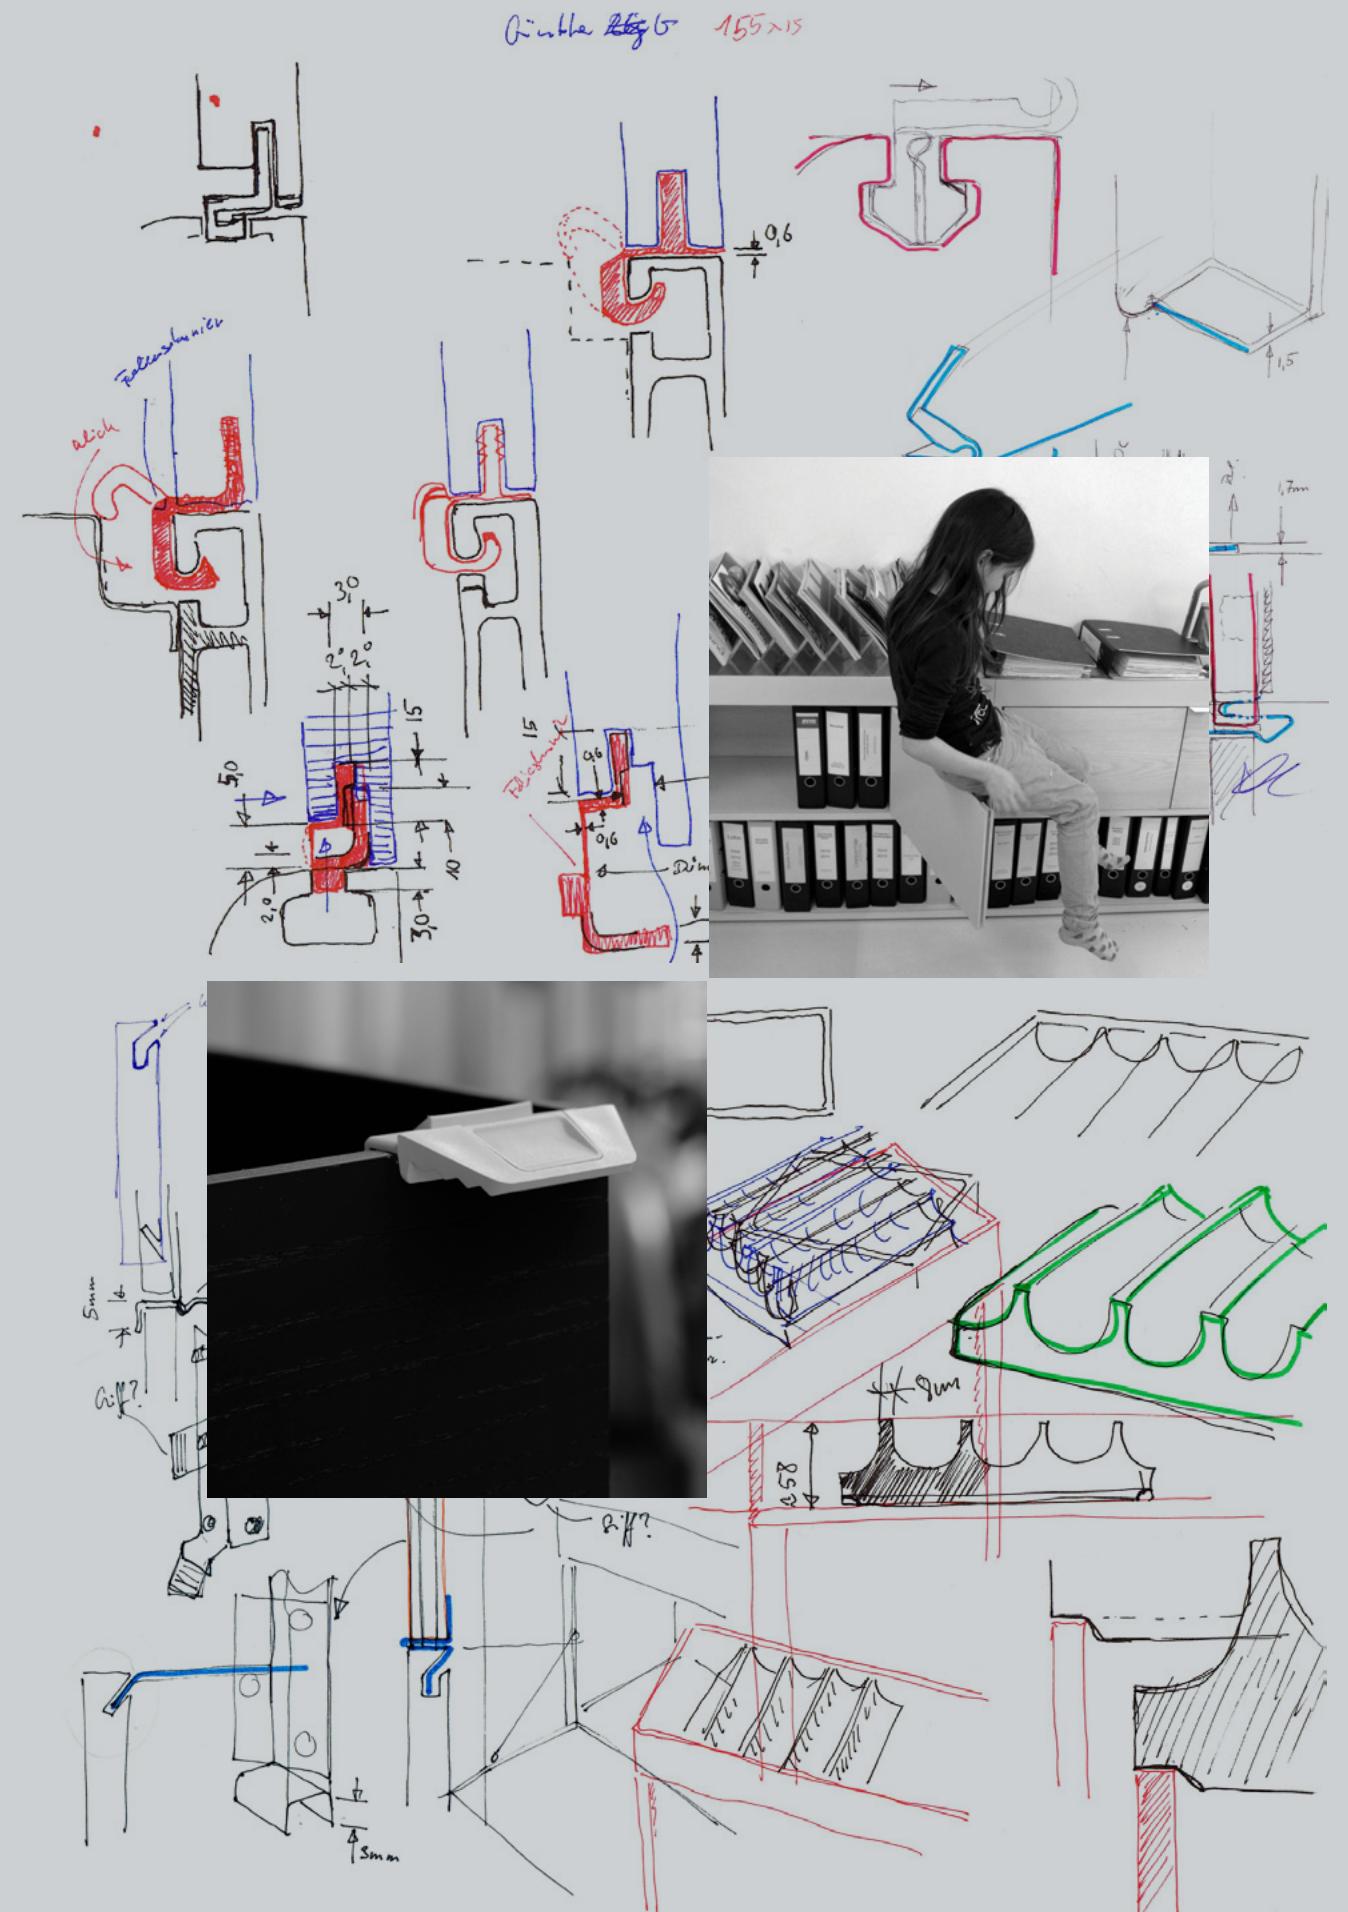

New Order's corner module combines practical and aesthetic qualities in a single design solution. The corner module lets you slip the shelving system around a corner or design your own closed formations or a semi-closed room in a room. The square corner module offers the same features as the other components in the system including the option of closing sections off with doors, back panels and side panels or building an open transparent column for visual display, as the tray function is also available in the square format of the corner module.

Use the corner module to build individual landscapes.
